National Exposure Standards: Not established for this product.

NHMRC TLV for ethanol 1000ppm or 1900 mgm/m³ is recommended.

Exposure Standard means the average concentration of a particular substance in the worker's breathing zone, exposure to which, according to current knowledge, should not cause adverse health effects nor cause undue discomfort to nearly all workers. It can be of three forms; time-weighted average (TWA), peak limitation, or short term exposure limit (STEL).

Time-weighted average (TWA) is defined as the concentration of that substance over an eight-hour working shift, and apply to an eight-hour day, for a five-day working week over an entire working lifetime. Short Term Exposure Limits (STEL) and Peak Limitations may also be specified for short periods of exposure such as 15 minutes.

Engineering Controls: No special requirements apart from ensuring adequate ventilation. Do not generate fine mists or aerosols.

Personal Protective Equipment: Wear – rubber gloves and eye protection

Hygiene Recommendations: Keep an eye wash fountain available.
